## **DETAILED ACTION**

## Election/Restrictions

1. Claims 8-19 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 11/24/02.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
  - 1. Determining the scope and contents of the prior art.
  - 2. Ascertaining the differences between the prior art and the claims at issue.
  - 3. Resolving the level of ordinary skill in the pertinent art.
  - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Application/Control Number: 09/970,437

Art Unit: 1742

4. Claims 1-7, is rejected under 35 U.S.C. 103(a) as being unpatentable over Gordz et al (5,552,239) in view of Zguris.

Gordz et al show an "electrochemical cell system" comprising laminar (planar) electrode members. (Fig. 1) There is an interposed laminar (planar) separator member. (Col. 2, lines 45-60 and col. 4, lines 50-54.)

The electrodes appear to be constituted of a "polymeric matrix composition" (see col. 3, lines 11-68 and col. 4, lines 50-55). There is a recitation of a "plasticizer" at col. 3, lines 1-7, which appear to be similar to, if not the same as those claimed in applicant's claim 7. Gordz et al at show the polymeric matrix composition of claim 6, see Example 1. Gordz et al do not show a "matted fiber paper" separator member.

Zguris shows mats of fibers which function as separators in batteries.

The reference refers to cellulose fibers. See col. 21, lines 30-40.

It would be considered within the skill of the art to substitute the separator materials of the Zguris reference for the material of the primary reference to Gordz et al because paper is constituted of fibers of cellulose.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Donald R. Valentine whose
